THE VERDICT

ACCESSIBILITY GRANTED

100

OUT OF 100 · 90 IS ACCESSIBILITY GRANTED

GRADE A

No failures in the four blocking checks (keyboard traps, sound that plays by itself, movement you can't pause, unsafe flashing), **and the score meets the 90 threshold. Human review of the important tasks is still needed.**

This score summarizes the scan results. It is not a percentage of accessibility or a legal determination.

WHERE YOU ARE, BY WCAG LEVEL

LEVEL A · THE BASICS	LEVEL AA · YOUR TARGET	LEVEL AAA
0 of 31 fail	**0 of 55 fail**	**Not tested**
WCAG 2.2 Level A	Title II requires WCAG 2.1 AA	This scan checks Levels A and AA only

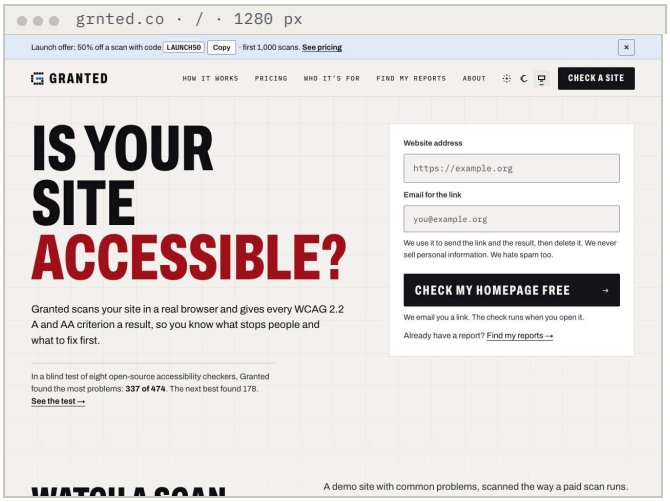
✕ can't get past ⚠ hard ✓ nothing found for them

From the problems this scan found; not a count of people.

THE JOB

0 problems found → **0** jobs to fix them

Jobs are work packages; many problems share one cause, so one change clears several.



Your homepage as the scan saw it; numbers are the jobs that touch it.

ICONS: WHO A PROBLEM AFFECTS (RED: IT CAN STOP THEM) Blind, screen reader · Low vision, color · Deaf, hard of hearing · Keyboard, movement · Memory, attention, dyslexia · Seizures, motion

Chips: the standards a problem counts against: A or AA (WCAG level) · 2.1 AA · Title II (ADA Title II; 2.2-only criteria aren't required by it) · Section 508 (WCAG 2.0 AA) · EN 301 549. AAA is not tested.

Decision requested: name a project lead, verify important tasks and review unresolved results. Schedule a rescan after changes.

Covers the 24 pages listed under What was tested. Automated testing doesn't find every barrier. Human review is still needed.

THE REPAIR PLAN · WHAT TO DO, IN ORDER

NO REPAIR JOBS

No repair jobs were identified in these checks. Review the coverage and unresolved results, and verify the important tasks.

Ordered by harm, then reach, then effort. These are initial priorities and effort estimates: confirm them with each lead. Every problem belongs to one job; its P code stays the same on every rescan. Small: one edit. Medium: related edits or specialist review. Large: changes how part of the site behaves.

Need help carrying out this plan?

Aegisaur, the team behind Granted, builds and runs accessible websites for cities, schools and special districts. We can review these findings with your staff and vendor and scope the work.

Talk to Aegisaur · aegisaur.com

After repairs, rescan the affected pages. Monitoring tells you when something new breaks.

THE ATLAS

EVERY PAGE SCANNED, WORST FIRST

Each page, its score, the jobs that touch it and the problems found there. Pictures are the scan's own; pages without one close up. A score of 100 means no scored issues were found. Problems not counted in the score can still need action.

WHAT THE SCAN SAW, STEP BY STEP

A KEYBOARD VISIT AND SIMULATED READOUT

The scan tested keyboard navigation and produced a simulated screen-reader readout (from the browser's accessibility tree). Grey lines are simulated announcements; marked lines are problems this scan found. A person still needs to verify the experience with a screen reader.

Rule checks

axe-core's WCAG 2.2 A and AA rules on all 24 pages at desktop and phone widths.

AI review

1801 of 1806 items reviewed. AI-flagged issues count only after they are double-checked; the others read **Needs review**.

Couldn't be decided: 6 criteria

2.3.1, 3.2.2, 3.3.1, 3.3.3, 3.3.7, 4.1.3 need a person.

Still to resolve

9 criterion results unresolved; 1 address not checked. Every reason is in the table that follows.

WCAG 2.1 AA and 2.2

49 of the 55 criteria are WCAG 2.1 AA, the ADA Title II standard; 6 are new in 2.2. WCAG 2.1 4.1.1 Parsing: satisfied for HTML/XML under current W3C guidance.

REPORT FILES AND IDENTITY

Complete web report WEB

Every screenshot, the simulated screen-reader readouts, the AI review and the fix prompts.

Complete evidence report HTML

Save the complete evidence report: every element, selector, measurement and transcript, offline.

NEXT STEPS

1. Assign job leads and confirm vendor access.
2. Do the stop-first jobs, run each job's check, rescan, and have a person verify the important tasks.

THIS SNAPSHOT

https://grnted.co/
scanned Nov 18, 2026 PT
WCAG 2.2 Level A and AA · scoring v14

HOW THIS SCAN WORKED

24 pages at 1280 and 390 px wide, in a real browser: axe-core's rule checks on every page, and interaction tests that press keys, zoom, resize and play media.

The AI review looked at images, page text, forms and documents. AI-flagged issues count only after they are double-checked.

The score runs from 0 to 100; with no failure in the four blocking checks and 90 or more, it is Accessibility Granted. It is not a percentage of accessibility or a legal determination.

What it can't judge: some criteria need a person, for example whether error messages make sense once a real form is sent. They're marked, never guessed.
